Object createProgram(void)

Create a program object validateProgram(Object program)

Validate a program object

Note: It is implied that all functions and symbolic names are methods and properties on a WebGL context object

Butte	Butters		Framebutters		
Obiect	createBuffer(void)	Obiect	createFramebuffer(void)		
•	Create a WebGLBuffer buffer object	- ,	Create a framebuffer object		
void	deleteBuffer(Object buffer)	void	deleteFramebuffer(Object buffer)		
	Delete a WebGLBuffer buffer object		Delete a framebuffer object.		
void	bindBuffer(ulong target, Object buffer)	void	bindFramebuffer(ulong target, Object buffer)		
	Bind a buffer object. Accepted values for target are:		Bind a framebuffer, target must be FRAMEBUFFER.		
	ARRAY_BUFFER ELEMENT_ARRAY_BUFFER	ulong	checkFramebufferStatus(ulong target)		
void	<pre>bufferData(ulong target, Object dta, ulong usage)</pre>		Return the framebuffer completeness status of a		
	Create and initialize a buffer object's data store.		framebuffer object. Return values are:

void

ZERO ONE FRONT BACK FRONT AND BACK SRC_COLOR DST COLOR stencilMask(ulong mask) void SRC_ALPHA DST_ALPHA Control the front and back writing of individual bits in CONSTANT_COLOR CONSTANT_ALPHA
ONE_MINUS_SRC_ALPHA
ONE_MINUS_DST_ALPHA the stencil planes. void stencilMaskSeparate(ulong face, ulong mask) ONE_MINUS_SRC_COLOR ONE_MINUS_DST_COLOR Control the front and/or back writing of individual ONE_MINUS_CONSTANT_COLOR bits in the stencil planes. ONE_MINUS_CONSTANT_ALPHA stencilOp(ulong sfail, ulong dpfail, ulong dppass) void In addition, sfactor can also be Set front and back stencil test actions. Accepted SRC ALPHA SATURATE values for sfail, dpfail and dppass are: void blendFuncSeparate(ulong srcRGB, ulong dstRGB, **KEEP ZERO INCR** INCR_WRAP ulong srcAlpha, ulong dstAlpha) REPLACE INVERT **DECR** DECR_WRAP Specify pixel arithmetic for RGB and alpha stencilOpSeparate(ulong face, ulong sfail, void components separately. ulong dpfail, ulong dppass) blendEquation(ulong mode) void Set front and/or back stencil test actions. Specify the equation used for both the RGB blend void clearStencil(long s) equation and the Alpha blend equation. Accepted Specify the clear value for the stencil buffer. values for mode are: any getParameter(ulong pname) FUNC_SUBTRACT FUNC_ADD FUNC_REVERSE_SUBTRACT Relevant parameters: STENCIL_TEST STENCIL_CLEAR_VALUE blendEquationSeparate(ulong modeRGB, void STENCIL_FAIL STENCIL_VALUE_MASK STENCIL_FUNC ulong modeAlpha) STENCIL REF Set the RGB blend equation and the alpha blend STENCIL_WRITEMASK STENCIL_BACK_FUNC equation separately. STENCIL_BACK_FAIL STENCIL_BACK_REF blendColor(float red, float green, void STENCIL_BITS STENCIL_BACK_WRITEMASk float blue, float alpha) STENCIL_BACK_VALUE_MASK Set the blend color STENCIL_BACK_PASS_DEPTH_FAIL getParameter(ulong pname) any STENCIL_BACK_PASS_DEPTH_PASS Relevant parameters: STENCIL PASS DEPTH FAIL **BLEND** BLEND COLOR STENCIL_PASS_DEPTH_PASS BLEND_SRC_RGB BLEND DST RGB BLEND_DST_ALPHA BLEND_SRC_ALPHA Array data BLEND_EQUATION_RGB BLEND_EQUATION_ALPHA Object createFloatArray(Array values) Depth buffer Object createByteArray(Array values) Object createUnsignedByteArray(Array values) enable | disable (DEPTH TEST) void Object createShortArray(Array values) Enable/disable depth testing. Object createUnsignedShortArray(Array values) depthFunc(ulong func) void Object createIntArray(Array values) Specify the value used for depth buffer comparisons. Object createUnsignedIntArray(Array values) Parameter func is one of: Create WebGL array objects from JS arrays. LESS **NEVER EQUAL LEQUAL** void drawArrays(ulong mode, long first, ulong count) GREATER NOTEQUAL GEQUAL **ALWAYS** Render primitives from array data. Accepted mode depthMask(bool flag) void values are: Enable or disable writing into the depth buffer. **POINTS** LINES LINE LOOP void depthRange(float nearVal, float farVal) LINE STRIP **TRIANGLES** TRIANGLE_STRIP Specify mapping of depth values from normalized TRIANGLE_FAN device coordinates to window coordinates. void drawElements(ulong mode, ulong count, clearDepth(float depth) void Specify the clear value for the depth buffer ulong type, ulong offset) Render primitives from array data. Accepted type enable | disable(POLYGON_OFFSET_FILL) void values are: Enable/disable polygon offset. UNSIGNED_BYTE UNSIGNED_SHORT polygonOffset(float factor, float units) void Set the scale and units used to calculate depth values. getParameter(ulong pname) any Relevant parameters: DEPTH_TEST DEPTH_RANGE DEPTH_WRITEMASK DEPTH_CLEAR_VALUE DEPTH FUNC **DEPTH BITS** POLYGON_OFFSET_UNITS POLYGON_OFFSET_FACTOR Uniform variables Multisampling enable | disable(SAMPLE_COVERAGE) ulong getUniformLocation(Object program, string name) void Return the location of a uniform variable. If enabled, the fragment's coverage is ANDed with the temporary coverage value. Object getActiveUniform(Object program, ulong idx) Return information about an active uniform variable. void enable | disable(SAMPLE_ALPHA_TO_COVERAGE) Returns an object: { size: ..., type: ..., name: ... }. If enabled, use the alpha value at the corresponding getUniform(Object program, ulong location) sample location to determine each bit. any void sampleCoverage(float value, bool invert) Return the value of a uniform variable Specify multisample coverage parameters. void uniform[1234][if](ulong location, ...) getParameter(ulong pname) Specify 1-4 float or int values of a uniform variable. anv

Specify pixel arithmetic. Accepted values for sfactor

uniform[1234][if]v(ulong location, Array v)

void

and dfactor are:

Set front and/or back function and reference value

for stencil testing. Accepted values for face are:

1-4 float or int values. SAMPLE_COVERAGE_VALUE SAMPLE_COVERAGE_INVERT uniformMatrix[234]fv(ulong location, void bool transpose. Object value) SAMPLE BUFFERS Specify the value of a matrix uniform variable using SAMPLES arrays of float values. getParameter(ulong pname) any Misc. Relevant parameters: MAX VERTEX UNIFORM VECTORS void viewport(long x, long y, ulong w, ulong h) MAX_FRAGMENT_UNIFORM_VECTORS Set the viewport. lineWidth(float width) void Attribute variables Specify the width of rasterized lines. void flush(void) ulong getAttribLocation(Object program, string name) Force execution of GL commands in finite time. Return the location of an attribute variable. void finish(void) Object getActiveAttrib(Object program, ulong idx) Block until all GL execution is complete. Return information about an active attribute clear(ulong mask) void variable. Returns an object: { size: ..., type: ..., Clear buffers to preset values, mask is the bitwise OR name: ... }. of one or more of getVertexAttrib(Object idx, ulong pname) any COLOR BUFFER BIT DEPTH BUFFER BIT Return a generic vertex attribute parameter. STENCIL_BUFFER_BIT Accepted pname values are: enable | disable (DITHER) void VERTEX_ATTRIB_ARRAY_ENABLED Enable/disable dithering of color comps or indices. VERTEX_ATTRIB_ARRAY_SIZE VERTEX_ATTRIB_ARRAY_STRIDE void colorMask(bool red, bool green, bool blue, bool alpha) VERTEX_ATTRIB_ARRAY_TYPE Enable and disable writing of frame buffer color VERTEX_ATTRIB_ARRAY_NORMALIZED
VERTEX_ATTRIB_ARRAY_BUFFER_BINDING components. clearColor(float red, float green, void CURRENT VERTEX ATTRIB float blue, float alpha) vertexAttribPointer(ulong idx, long size, void Specify clear values for the color buffers. ulong type, bool norm, long stride, ulong offset scissor(long x, long y, ulong width, ulong height) void Define the scissor box. Define an array of generic vertex attribute data. getError(void) ulong Accepted type values are: Return error information. Error values are: **FIXED BYTE** UNSIGNED BYTE OUT_OF_MEMORY INVALID ENUM FLOAT **SHORT** UNSIGNED_SHORT INVALID_VALUE INVALID_OPERATION vertexAttrib[1234]f(ulong idx, ...) void INVALID_FRAMEBUFFER_OPERATION Specify 1-4 float values of a generic vertex attribute. NO ERROR vertexAttrib[1234]fv(ulong idx, Array v) void getParameter(ulong pname) anv Specify the value of a generic vertex attribute as an Parameters values: array of 1-4 float values. VIEWPORT bindAttribLocation(Object program, ulong idx, void MAX VIEWPORT DIMS string name) COLOR_CLEAR_VALUE Associate a generic vertex attribute index with a SCISSOR_BOX named attribute variable. LINE_WIDTH enableVertexAttribArray(ulong idx) void ALIASED_POINT_SIZE_RANGE disableVertexAttribArray(ulong idx) void ALIASED_LINE_WIDTH_RANGE Enable or disable a generic vertex attribute array COLOR_WRITEMASK getParameter(ulong pname) SUBPIXEL BITS anv Relevant parameters: MAX_VERTEX_ATTRIBS

Relevant parameters:
